
With 5 nodes there are 8 possible routes

The modeling of the helipads is a combination of hashes and graphs.

hash_helipad (helipad)
hash_route (helipad_1, helipad_2)

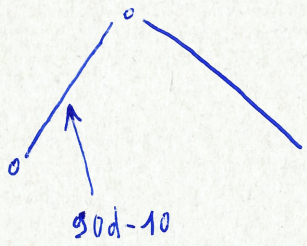
hash_route = [redacted]
hash_helipad (helipad_1) + hash_helipad (helipad_2)
= #90d-10
#90d to -10

ntcos

hynix

retour_route (h1, h2)
= inverse_sort
= (list
= (route
= (h1, h2)))

The encryption of information in the helipad system is done so that employees, [redacted] can have access to the data without having access to it (routes, [redacted], etc)



[redacted]

system up to the helipads served as another layer.

of anonimity.
